

Bad Weather Statement

Due to increased interference on the 5 Gig Wi-Fi band and constant demand for bandwidth, SDWISP has upgraded many of our radio links between our relay sites to the new 60GHz interference free band.

During periods of heavy rain, you may experience a short internet outage as the new 60GHz band is very high frequency and is more susceptible to rain fade.

If your internet service is mission critical, we recommend that you have a redundant internet connection during times of heavy rain.

Thank you for your understanding
